Durée : 4 heures	

Pressostats, pressostats différentiels type RT

Introduction

Un pressostat RT renferme un contact inverseur unipolaire dont la position est fonction de la pression dans le raccord et de la valeur réglée sur l'échelle.
La gamme RT comprend des pressostats pour applications générales dans les installations frigorifiques industrielles.

La gamme RT comprend en outre des pressostats différentiels, pressostats à zone neutre et des pressostats spéciaux avec contacts plaqués or destinés aux régulations avec automate programmable.

Différentiel mécanique fixe : 0,2 bars

Pressostats, pressostats différentiels, type RT

**Conception
Fonctionnement**

Pressostat type RT

- 5. Bouton manuel
- 9. Echelle de plage
- 10. Borne de bouclage
- 11. Racc. de câble tube électr. 13,5
- 12. Ressort principal
- 14. Bornes de raccordement
- 15. Tige principale
- 16. Système de contact (17-4030)
- 17. Rouleau d'entraînement
- 18. Bras de contact
- 19. Molette de réglage de différentiel
- 23. Élément de soufflet
- 25. Trou de montage
- 27. Tubulure de raccordement
- 38. Vjs de terre
- 39. Purge
- 44. Tige de réglage de pression

Le soufflet du pressostat RT communique par la tubulure de raccordement avec le côté haute pression ou le côté basse pression de l'installation sous contrôle.

Le ressort principal (12) peut – en tournant le bouton manuel (5) – être réglé pour équilibrer la pression exercée sur le soufflet. A une pression croissante, le soufflet est comprimé. La tige principale (15) se déplace alors vers le haut jusqu'à ce que la pression du ressort et la pression du soufflet soient en équilibre.

La tige principale (15) est munie d'un rouleau d'entraînement (17) et d'une molette de réglage de différentiel qui, ensemble, transmettent le mouvement de la tige principale au système de contact (16).

RT 6W, 6B, 6S, RT 6AW, 6AB, 6AS, RT 30AW, 30AB, 30AS, RT 36B, 36S.

Ces types sont équipés d'un soufflet double: un soufflet extérieur et un soufflet de régulation. Ils ont été testés et homologués par TÜV (Technischer Überwachungs Verein, Allemagne) selon DIN 32733).

- W = Wächter (pressostat)
(pressostat à réarmement extérieur)
- B = Begrenzer
(pressostat à réarmement intérieur)
- S = Sicherheitsdruckbegrenzer
(pressostat à réarmement intérieur).

**Généralités sur les appareils homologués
DIN 32733**

1. Les appareils sont à système de soufflet double. Lorsque la pression dans l'installation dépasse la valeur de réglage, l'appareil arrête automatiquement l'installation. Le système de soufflet double évite toute perte de fluide en cas de rupture du soufflet.
2. Les modèles W ou AW sont à réarmement automatique lorsque la pression a chuté du différentiel sous la valeur de réglage.
3. Les modèles B ou AB sont à réarmement manuel par bouton extérieur. Le réarmement n'est possible que lorsque la pression a chuté à 4 bar sous la valeur de réglage.
4. Les modèles S ou AS sont à réarmement manuel par bouton intérieur. Le réarmement n'est possible que lorsque la pression a chuté sous la valeur de réglage d'une valeur équivalant au différentiel.

Conformément aux règles imposées par DIN 32733, une rupture du soufflet provoque l'arrêt du compresseur frigorifique qui ne pourra démarrer qu'après remplacement du pressostat. En cas de rupture du soufflet extérieur, la pression d'ouverture du RT 36 chute de 2,5 bar, celle du RT 6 et de RT 30 de 4,5 bar sous la valeur de réglage. Ceci signifie que l'appareil s'ouvre sous pression de condensation normale: il est ainsi à sécurité intrinsèque.

Tous les pressostats RT, y compris ceux qui sont homologués DIN 32733, sont insensibles aux variations de la température ambiante près du corps du pressostat. C'est ainsi que la pression d'ouverture et le différentiel sont constants à condition, toutefois, que les limites imposées pour la température ambiante soient respectées.
