

Ex 1

(0,5 + 2) pts

$$\bar{F'A'} = \frac{f \times f'}{\bar{FA}} = \frac{40 \times (-100)}{-100} = +16 \text{ mm} \quad (1,5)$$

$$\gamma = -\frac{f}{\bar{FA}} = -\frac{40}{-100} = +0,4$$

$$\bar{A'B'} = \gamma \times \bar{AB} = +0,4 \times 20 = +8 \text{ mm} \quad (1 \text{ pt})$$

Ex 2

(0,5 + 2,5) pts

échelle 1/20

$$\frac{1}{\bar{SA'}} + \frac{1}{\bar{SA}} = \frac{2}{\bar{SC}}$$

$$\frac{1}{\bar{SA'}} = \frac{2}{(-80)} - \frac{1}{(-120)}$$

$$\frac{1}{\bar{SA'}} = \frac{-3 + 1}{120} = -\frac{1}{60}$$

$$\Rightarrow \bar{SA'} = -60 \text{ mm}$$

(2 pts)

Ex 3

(2,5 pts)

$$2) \quad n_1 \times \sin i_1 = n_2 \times \sin i_2$$

$$\sin i_2 = \frac{1 \times \sin 30^\circ}{1,5}$$

(1,5 pts)

$$\Rightarrow i_2 = 19,47^\circ$$

$$3) \quad n_1 < n_2 \text{ donc } i_1 > i_2 \text{ donc } i_{1, \text{max}} = 90^\circ$$

$$\sin i_{2, \text{max}} = \frac{1 \times \sin 90^\circ}{1,5}$$

(1 pt)

$$\Rightarrow i_{2, \text{max}} = 41,81^\circ$$

Ex 4

- Faux
 - Vrai
 - Faux
 - Vrai
- (2 pts)

Ex 5

(1,5 pts)

a) transmet l'information au cerveau en transformant l'excitation lumineuse en influx nerveux - Recit l'image: sert d'icône ---

(1,5 pts)

b) 1 des lentilles de l'œil.
- permet de faire la mise au point.
(l'accommodation)
