**DOSSIER TECHNIQUE**

**1/ Présentation du système**

Les volets hypersustentateurs et les bords de bord d'attaque sont des gouvernes secondaires, leur rôle est d'améliorer le vol à basses vitesses.

**Le bec de bord d'attaque**

Le bec de bord d'attaque est une petite aile auxiliaire placée en avant du bord d'attaque. Lorsqu'il est déployé à basse vitesse donc forte incidence. Le bec ouvre une fente ayant essentiellement les mêmes fonctions que les fentes du bord de fuite, canaliser l'air sous pression de l'intrados vers l'extrados pour reculer le décrochage et augmenter la portance. Cependant, étant donné que le bec est une surface portante, il vient s'ajouter à la surface de l'aile donnant une meilleure portance aux grands angles.

Données numériques pour l'aéronef AXXX	À l'atterrissage (altitude 0 m)	Croisière (altitude 13000 m)
Masse volumique de l'air ( $\rho$ )	1,22 kg/m <sup>3</sup>	0,3 kg/m <sup>3</sup>
Surface totale de la voilure (S)	122.6 m <sup>2</sup>	122.6 m <sup>2</sup>
Vitesse de l'avion/air (V)	230 km/h ou (63.89 m/s)	870 km/h ou (241.6 m/s)
Masse de l'avion (M)	64 500 kg	70 000 kg
Angle d'incidence ( $i$ )	13°	5°

TOLEANCEMENT NORMALISE		Eléments non idéaux		Eléments idéaux	
Symbole de la spécification		Elément(s) de tolérance(s)	Elément(s) de référence	Référence(s) spécifiée(s)	Zone de tolérance
Type de spécification Exemple : Position, Orientation, Battement, Localisation	Condition de conformité : L'élément toléré doit se situer tout entier dans la zone de tolérance.	<input type="checkbox"/> unique <input type="checkbox"/> groupe	<input type="checkbox"/> unique <input type="checkbox"/> multiples	<input type="checkbox"/> simple <input type="checkbox"/> commune <input type="checkbox"/> système	<input type="checkbox"/> Contraintes orientation et position par rapport à la référence spécifique Axe C de la zone de tolérance Contraintes disant de 0.5 mm de la DROITE-A et perpendiculaire à PLAN-B
		Ligne nominalement rectiligne, axe réel d'une surface nominale cylindrique et d'une surface nominale cylindrique.	Ensemble d'une Ligne A nominalement rectiligne, axe réel d'une surface nominale cylindrique et d'une surface B nominalement planes.	Référence primaire : DROITE-A axe du cylindre associé à la surface repérée A Référence secondaire : PLAN-B associé à B, perpendiculaire à DROITE-A et contraint tangent du côté libre matière.	
Schéma extrait du dessin de définition					

## FORMULAIRE

### Transmission de mouvement / Cinématique :

$$r = \frac{\omega_s}{\omega_e} = \frac{Z_{\text{menantes}}}{Z_{\text{menées}}} = \frac{d_{\text{menantes}}}{d_{\text{menées}}}$$

$$d = m \cdot Z$$

$$V = \omega \cdot R$$

$r$  = rapport de réduction sans unité  
 $\omega$  = Vitesse angulaire en rad/s  
 $Z$  = nombre de dents  
 $d$  = diamètre en mm  
 $m$  = module  
 $V$  = vitesse linéaire en m/s  
 $R$  = rayon en m

### Energétique :

$$\eta = P_s / P_e$$

$$P = F \times V$$

$\mu$  = rendement sans unité  
 $P$  = puissance en watt  
 $F$  = force en newton  
 $V$  = vitesse en m/s

### Résistance des matériaux :

$$\tau = \frac{T}{S} \leq R_{pg} = \frac{R_{eg}}{k}$$

$$R_{eg} = 0,5 \times R_e \text{ pour } R_e \leq 270 \text{ MPa}$$

$$R_{eg} = 0,7 \times R_e \text{ pour } 270 \leq R_e \leq 520 \text{ MPa}$$

$\tau$  = contrainte de cisaillement en Mpa  
 $T$  = effort tranchant en N  
 $S$  = surface en mm<sup>2</sup>  
 $R_{pg}$  = résistance pratique au cisaillement en MPa  
 $R_{eg}$  = résistance élastique au cisaillement en MPa  
 $k$  = coefficient de sécurité sans unité  
 $R_e$  = résistance élastique au cisaillement

Specific Repairs

Table 202

**CAUTION:** OBEY THE REPAIR EFFECTIVITY PER WEIGHT VARIANT AND AIRCRAFT TYPE GIVEN IN TABLE 207.

F. Repair of the Nose Area of the Top Skin above the ribs and between the ribs for Slats 1 thru 5

**NOTE:** This repair is applicable to aircraft up to 89 tonnes MTOW.

**NOTE:** For aircraft up to 93.5 tonnes MTOW refer to paragraph 5.G.

**NOTE:** It is recommended that Slats 1 thru 5 listed below be repaired with 93.5 tonnes MTOW repairs because the Slats are capable of such MTOW. These Slats are interchangeable with A318, A319 and A321-200 that are certified with 93.5 tonnes MTOW loads. This is necessary to keep the interchangeable status.

Slat 1: D574 60600 006 thru 013 and D574 60677 000 thru 005

Slat 2: D574 60278 004 thru 013 and D574 60277 000 thru 003

Slat 3: D574 60378 006 thru 011 and D574 60377 000 thru 003

Slat 4: D574 60478 006 thru 011 and D574 60477 000 thru 003

Slat 5: D574 60598 006 thru 011 and D574 60577 000 thru 003

**NOTE:** This repair is applicable for dent damage on Slats 1 thru 5 to the areas shown in Figure 206 (Sheets 1 thru 3). This repair is valid for the weight variants given in Table 207.

AIRCRAFT TYPE	WEIGHT VARIANT
A320-100	000, 001, 002
A320-200	000, 001, 002, 003, 004, 005, 006, 007, 008, 009, 010, 011, 012, 013, 016

Effectivity per Weight Variant and Aircraft Type

Table 207

**NOTE:** Refer to Paragraph 23 'Weight Variant Information' in the INTRODUCTION of the SRM. Tables in the subparagraphs give the necessary data about all weight variants and their required information for allowable damage and repair applicability.

(1) Repair General

This scheme provides instructions to repair the nose area of the top skin for slats 1 thru 5.

It details instructions for a repair between the ribs and for a repair above the ribs.

For this scheme the slat is divided into repair zones (Refer to Figure 206 Sheets 1 thru 3).

## (2) Repair Materials

For these repairs use only the materials that follow:

ITEM	NOMENCLATURE	QTY	MATERIAL/REMARKS
1	Backing-Plates	A/R	2024T42 or 2024T3, clad or unclad 2.00 mm (0.078 in.) thick for Slat 1. 2024T42 or 2024T3, clad or unclad 1.80 mm (0.071 in.) thick for Slats 2 thru 5 (Refer to SRM Chapter 51-31-00).
2	Backing-Plates	A/R	2024T42 clad or 2024T3 clad 2.00 mm (0.078 in.) thick for Slat 1. 2024T42 clad or 2024T3 clad 1.80 mm (0.071 in.) thick for Slats 2 thru 5 (Refer to SRM Chapter 51-31-00).
3	Skin Insert	1	2024 clad or 2024T3 clad 1.80 mm (0.071 in.) thick for Slat 1, MSN 0002-0363 and Slats 2 thru 5. 2024T42 clad or 2024T3 clad 2.00 mm (0.078 in.) thick for Slat 1, MSN 0364-9999 (Refer to SRM Chapter 51-31-00).
4	Fasteners	A/R	Refer to table 208.
5	Sealant	-	For Slats 1 and 2, Material No. 09-016 (Refer to SRM Chapter 51-35-00). For Slats 3 thru 5, Material No. 09-012A with Primer, Material No. 09-586 (Refer to CML). Material No. 09-023 is an alternative (Refer to CML).
6	Pins, Gripper	A/R	Local resources.
7	Sealing Plate	A/R	Aluminum Shim MIL-S-22499, composition 1 0.10 mm (0.004 in.) to 0.20 mm (0.008 in.) thick - alternative to Item 8.
8	Sealing Plate	A/R	2024T42 or 2024T3, 0.60 mm (0.023 in.) to 1.00 mm (0.039 in.) thick (Refer to SRM Chapter 57-31-00) - alternative to Item 7.
9	Shim	1	2024T42 clad or unclad 0.20 mm (0.008 in.) thick.

ITEM	NOMENCLATURE	QTY	MATERIAL/REMARKS
-	Sealant	A/R	Material No. 09-013 (Refer to SRM Chapter 51-35-00).
-	Sealant	A/R	Material No. 09-016 (Refer to SRM Chapter 51-35-00).
-	Cleaning Agent	A/R	Material No. 11-026 (Refer to SRM Chapter 51-35-00).
-	Epoxy Primer	A/R	Material No. 16-006B (Refer to SRM Chapter 51-35-00).
-	Bonding Primer	A/R	Material No. 08-055 (Refer to SRM Chapter 51-35-00).
-	Alodine 1200	A/R	Material No. 13-002 (Refer to SRM Chapter 51-35-00).
-	Alodine 1000 or 1500	A/R	Material No. 13-003 (Refer to SRM Chapter 51-35-00).

## (3) Repair Instructions

The repair schemes for Zones A and B are shown in Figure 206 (Sheets 4 thru 11). For repair zone dimensions refer to Figure 206 sheet 1).

**NOTE:** For the different types of fasteners permitted in each repair zone on slats 1 thru 5 see Table 208.

ITEM	ZONE	QUANTITY	FASTENER TYPE (Refer to SRM 51-40-00)
SLAT 1	A	A/R	NAS1921C05
	B	A/R	NAS1921C05
SLAT 2	A	A/R	NAS1921C05
SLAT 3	A	A/R	NAS1921C05
	B	A/R	NAS1921C05
SLAT 4	A	A/R	NAS1921C05 Alternative - CR3522P5 except inboard and outboard of the Hold Down ribs where NAS1921C05 must be used.
SLAT 5	A	A/R	NAS1921C05 Alternative - CR3522P5 except inboard and outboard of the Hold Down ribs where NAS1921C05 must be used.

Table 2

B. Repair Material Uses

- (1) PR1422A is used to make a seal layer over beads of sealant and over rows of fasteners. You can apply it with a brush.
- (2) PR1422B is used to make a bead of sealant where it is necessary. You can apply it with a spatula or an extrusion gun.
- (3) PR1431G is used as an interfay sealant. You can apply it with a brush. It has a long application life, but it also takes a long time to cure.
- (4) PR147 and PR146 are a one part liquid for brush application. They are used to promote good adhesion of sealants. Special care is necessary when using these materials on unprotected titanium structure. The titanium should only be at normal ambient temperature.
- (5) Proseal 860B 1/6 is a quick cure sealant suitable for application with a sealant gun or spatula.
- (6) PR5401K is used to make a short term repair of a fuel leak. You can apply it with a brush. It cures very quickly.
- (7) PR7422 is used to make a seal over separate fasteners.
- (8) PR1005-L or PR1005CH is used when it is necessary to put a barrier top coat that dries very quickly over other sealants.

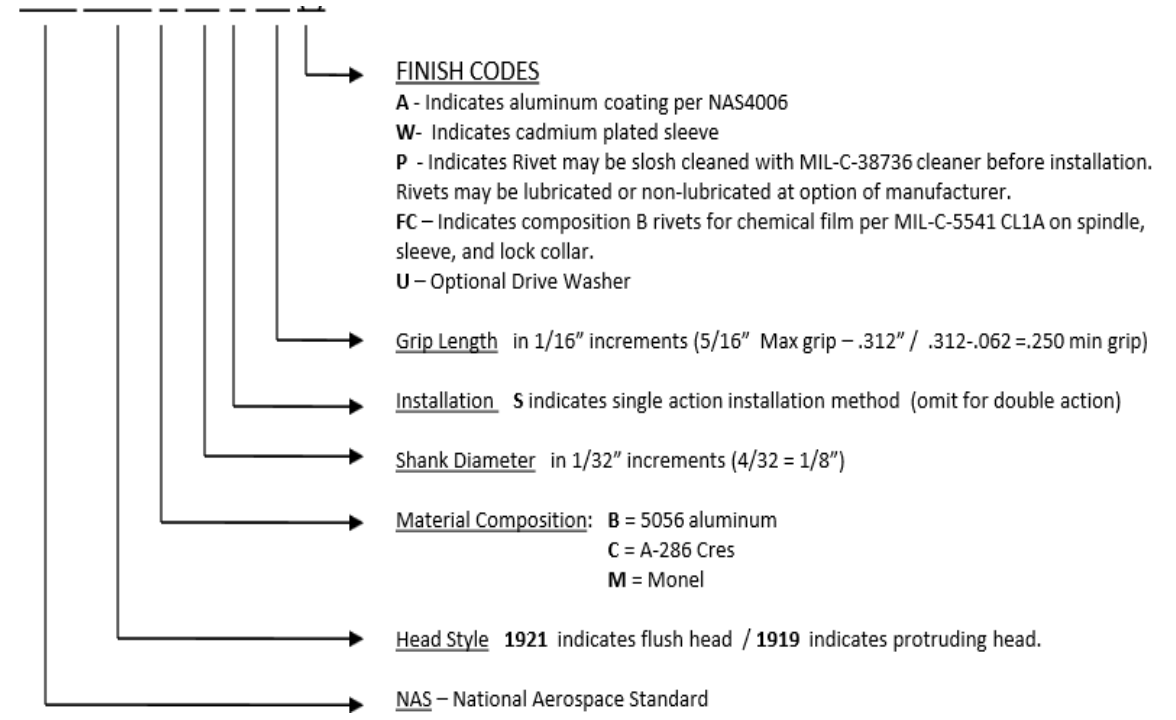

NOTE:  
 1 'P1' MUST BE EQUAL OR GREATER THAN 'P' MINIMUM.  
 2 'P2' MUST BE EQUAL 0.5P.
